Periodic Table of Style Rotation — Stocks

American Century Investments®

This style rotation table compares the returns of various indices. Fluctuations in market cycles demonstrate the importance of diversification. Diversification does not assure a profit nor does it protect against loss of principal. As with any investment, it is possible to lose money.

Large Cap Stocks are represented by the Russell 1000 Index, which measures the performance of the large-cap segment of the U.S. equity universe. It is a subset of the Russell 3000 Index and includes approximately 1,000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000 represents approximately 92% of the U.S. market.

Large Growth Stocks are represented by the Russell 1000 Growth Index, which measures the performance of the large-cap growth segment of the U.S. equity universe. It includes those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

Large Value Stocks are represented by the Russell 1000 Value Index, which measures the performance of the large-cap value segment of the U.S. equity universe. It includes those Russell 1000 companies with lower price-to-book ratios and lower expected growth values.

Mid Cap Stocks are represented by the Russell Midcap Index, which measures the performance of the mid-cap segment of the U.S. equity universe. The Russell Midcap Index is a subset of the Russell 1000 Index. It includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership. The Russell Midcap Index represents approximately 31% of the total market capitalization of the Russell 1000 companies.

Small Cap Stocks are represented by the Russell 2000 Index, which measures the performance of the small-cap segment of the U.S. equity universe. The Russell 2000 Index is a subset of the Russell 3000 Index, representing approximately 10% of the total market capitalization of that index. It includes approximately 2,000 of the smallest securities based on a combination of their market cap and current index membership.

Foreign Stocks are represented by the MSCI EAFE Index (Europe, Australasia, and Far East), which is a widely followed index of common stocks from 22 developed market countries.

Emerging Markets are represented by the MSCI Emerging Markets Index, which measures the performance of stocks in global emerging market countries.

Real Estate is represented by the Wilshire U.S. REIT Index, which measures the performance of U.S. publicly traded Real Estate Investment Trusts.

Commodities are represented by the Bloomberg Commodity Total Return index, which is composed of futures contracts and reflects the returns on a fully collateralized investment in the BCOM. This combines the returns of the BCOM with the returns on cash collateral invested in 13 week (3 Month) U.S. Treasury Bills.

Bonds are represented by the Bloomberg Barclays U.S. Aggregate Bond Index, which covers the USD- denominated, investment-grade, fixed-rate, taxable bond market. The index includes government and corporate securities, mortgage-backed securities, and asset-backed securities, with maturities of at least one year.

The **Diversified Portfolio** is represented by an equal portion (10%) of the 10 indices in the periodic table.

A mutual fund's portfolio may differ significantly from the securities held in the indices. These indices are not available for direct investment; therefore, their performance does not reflect the expenses associated with the active management of an actual portfolio.

Standard Deviation measures how widely performance has varied from an average, and it is an indicator for potential volatility. A high standard deviation indicates that the range of performance has been wide, identifying greater potential volatility.

The standard deviations shown are calculated by Morningstar. Morningstar computes standard deviation using the trailing monthly total returns for the appropriate time period. All of the monthly standard deviations are then annualized.

Periodic Table of Sector Rotation — Bonds

American Century Investments®

This sector rotation table compares the returns of various indices. Fluctuations in market cycles demonstrate the importance of diversification. Diversification does not assure a profit nor does it protect against loss of principal. As with any investment, it is possible to lose money.

T-Bills are represented by the Citigroup 3-Month T-Bill Index, an index of three-month Treasury Bills.

Treasuries are represented by the Bloomberg Barclays U.S. Treasury Index, which is comprised of U.S. Treasury securities with a remaining maturity of at least one year.

TIPS are represented by the Bloomberg Barclays U.S. Treasury Inflation-Protected Securities Index, which measures the return of U.S. Treasuries with fixed-rate coupon payments that adjust for inflation as measured by the Consumer Price Index for All Urban Consumers (CPI-U).

Mortgages are represented by the Bloomberg Barclays U.S. Mortgage-Backed Securities (MBS) Index, which is comprised of 30-and 15-year fixed-rate agency mortgage-backed pass-through securities issued by Ginnie Mae (GNMA), Fannie Mae (FNMA), and Freddie Mac (FHLMC), as well as hybrid adjustable-rate mortgage (ARM) pass-through securities.

Investment Grade Corporates are represented by the Bloomberg Barclays U.S. Corporate Investment-Grade Index, which tracks the performance of publicly issued, USD-denominated, fixed-rate, investment-grade corporate debt.

High Yield Corporates are represented by the Bloomberg Barclays U.S. Corporate High-Yield Index, which tracks the performance of publicly issued, USD-denominated, fixed-rate, below investment-grade corporate debt.

Unhedged Foreign Bonds are represented by the Bloomberg Barclays Global Treasury ex-U.S. Index, which tracks the performance of investment-grade, fixed-rate, local-currency-denominated sovereign debt from certain foreign countries.

Investment Grade Municipals are represented by the Bloomberg Barclays Municipal Bond Index, which is a market value-weighted index designed for the long-term, investment-grade, tax-exempt bond market.

High Yield Municipals are represented by the Bloomberg Barclays High Yield Muni Index, which is composed of U.S. non-investment grade municipal securities with a remaining maturity of one year or more.

Aggregate Bond Index is represented by the Bloomberg Barclays U.S. Aggregate Bond Index, which covers the USD-denominated, investment-grade, fixed-rate, taxable bond market. The index includes government and corporate securities, mortgage-backed securities, and asset-backed securities, with maturities of at least one year.

A mutual fund's portfolio may differ significantly from the securities held in the indices. These indices are not available for direct investment; therefore, their performance does not reflect the expenses associated with the active management of an actual portfolio.

Inflation is represented by the Consumer Price Index for All Urban Consumers (CPI-U). CPI-U measures changes in the prices paid by urban consumers for a representative basket of goods and services.

The **federal funds rate** is the interest rate at which depository institutions lend balances at the Federal Reserve to other depository institutions overnight.
